IPADEOLA OLUWASEUN TAIWO

CLOUD ENGINEER | DEVOPS ENGINEER | IT ADMINISTRATOR

Lagos, Nigeria • +234810215432 • ipadeola.it@gmail.com • linkedin.com/in/ipadeola-taiwo • taiwoipadeola.space

PROFILE SUMMARY

Cloud & DevOps Engineer with hands-on experience building and managing Azure cloud infrastructure using Terraform and implementing CI/CD workflows with GitHub Actions. Experienced in Infrastructure as Code, Azure networking, virtual machines, storage, identity and access management, Linux, and cloud automation. Strong understanding of CI/CD principles including validation, planning, artifact management, controlled deployment, and infrastructure lifecycle management. Completed a six-month intensive Cloud and DevOps Engineering programme at Hagital Consulting. Driven by innovation and continuous improvement, with a focus on building scalable, secure, and automated cloud environments using modern DevOps practices.

CORE COMPETENCIES

- **Cloud Platforms**: Microsoft Azure, AWS
- **Cloud Infrastructure**: Azure VMs, Storage ccounts, Resource Groups, VNets
- **Infrastructure as Code**: Terraform, Modules, Remote State
- **Version Control**: Git, GitHub, Branching & Collaboration Workflows
- **CI/CD Pipelines**: GitHub Actions, Automated Validation, Terraform Plan & Apply
- **Security**: Cloud Security Best Practices, Secrets Management, Access Control
- Containerisation: Docker, Kubernetes (foundations)
- **Linux Administration**: Linux CLI, Package Management, SSH, Nginx
- **Networking**: VNets, Subnets, NSGs, VNet Peering, TCP/IP, Firewalls
- **Identity & Access Management**: Microsoft Entra ID, Azure RBAC, Service Principals
- **Automation & Scripting**: Azure CLI, Bash, Python
- **Technical Documentation**: Infrastructure, Deployment & Troubleshooting Docs
- IT Infrastructure Administration
- Technical Support & Troubleshooting

CERTIFICATIONS & TRAINING

- **Cloud & DevOps Engineering Certificate**: Hagital Consulting (Sep 2026)
- **LFS250**: Kubernetes & Cloud Native Essentials Linux Foundation
- **Microsoft Azure Administrator AZ-104**: In Progress
- **LFS101**: Introduction to Linux, Linux Foundation
- **LFS158: Introduction to Kubernetes**: Linux Foundation
- **Google Cybersecurity Professional Certificate**: Google/Coursera
- **Microsoft AI Skills Fest 2026**: Microsoft
- **Tools of the Trade**: Linux and SQL, Google/Coursera

WORK EXPERIENCE

HEAD OF OPERATIONS / IT & TECHNOLOGY

Relitorin International Inc. Lagos, Nigeria February 2023 – Present

- Build and manage cloud infrastructure in Microsoft Azure including virtual machines, networking, storage, resource groups, and identity and access controls.
- Provision Azure infrastructure using Terraform, applying Infrastructure as Code principles to improve consistency, repeatability, and infrastructure management.
- Develop CI/CD workflows using GitHub Actions to automate Terraform formatting, validation, planning, artifact management, and infrastructure deployment.
- Troubleshoot deployment and infrastructure issues across development and cloud environments, identifying configuration, dependency, authentication, and connectivity problems.
- Manage source code and application development workflows using Git and GitHub, following structured development and deployment practices.
- Document infrastructure configurations, deployment procedures, and troubleshooting steps to improve repeatability and knowledge sharing.
- Manage day-to-day IT operations including network connectivity, workstation support, and user-access coordination across business operations.

IT ADMINISTRATOR

Big8 Integrated, Lagos, Nigeria March 2021 – November 2022

- Managed and supported day-to-day IT infrastructure including network connectivity, workstations, software, user accounts, and peripheral devices.
- Configured and maintained user accounts, permissions, and system access across company platforms.
- Troubleshot network, system, software, and hardware issues to minimise disruption to business operations.
- Supported backup and recovery procedures and documented recurring technical issues to improve troubleshooting efficiency.

IT SUPPORT

Dalf Eti, Lagos, Nigeria February 2020 – October 2020

- Provided technical support for users experiencing hardware, software, connectivity, and application issues.
- Installed, configured, and updated software and workstation systems while maintaining technical documentation.

RECENT PROJECTS

Terraform CI/CD Pipeline with GitHub Actions

GitHub Actions | Terraform | Azure | Service Principal | Cloud-init

- Designed and implemented a three-stage Terraform CI/CD workflow covering formatting, validation, planning, artifact management, and controlled deployment.
- Configured GitHub Actions to authenticate securely with Azure using Service Principal credentials stored as GitHub Secrets zero manual terraform commands in production.
- Generated and stored the Terraform execution plan as an artifact before deployment, ensuring applied infrastructure matched the reviewed plan exactly.
- Diagnosed and resolved nine real pipeline failures including a silent 6-minute hang traced to a missing -input=false flag and an OOM kernel kill from undersized VM RAM.

Terraform Enterprise Multi-Environment Azure Infrastructure

Terraform | Azure | Remote State | State Locking | Modules

- Designed a reusable Terraform module to provision three isolated Azure environments: payments, analytics, and platform eliminating duplicated infrastructure configuration.
- Implemented Azure Blob Storage remote state with state locking proven live through a two-terminal concurrent-apply test.
- Recovered Terraform state following a live network failure during an active deployment using force-unlock and state push procedures.

Terraform Azure VM Deployment with Remote State

Terraform | Azure VM | VNet | NSG | Azure Storage | SSH

- Provisioned a complete Azure VM environment using Terraform including VNet, subnet, NSG, NIC, public IP, and Linux VM.
- Diagnosed and resolved five production errors from first principles including silent NSG association failure and SSH key path issues.

Azure Secure Infrastructure Lab

Azure | VNet | NSG | Azure Bastion | NAT Gateway | Azure CLI

- Designed a secure Azure network with workload VMs deployed without public IP addresses, all access through Azure Bastion.
- Implemented NAT Gateway for controlled outbound connectivity and NSG rules for traffic segmentation.

Multi-Region Azure VNet Peering

Azure VNet | Global VNet Peering | UDR | NSG | Azure CLI

- Designed a hub-and-spoke topology connecting Azure VNets across multiple regions using global VNet peering over Microsoft's backbone.
- Implemented User Defined Routes and NSG rules to control traffic flow between network segments.

CLI-Deployed Website on Azure VM

Azure CLI | Bash | Ubuntu | Nginx | NSG | SCP

- Provisioned and configured an Azure Ubuntu VM entirely through Azure CLI, no portal. Diagnosed and resolved a live NSG priority conflict.
- Automated server provisioning with Bash and deployed a web application via SCP, verified through the VM public endpoint.

TECHNICAL SKILLS

- Cloud Platform: Microsoft Azure, AWS (foundations)
- IaC: Terraform, Terraform Modules, Terraform State Management
- CI/CD: GitHub Actions, Pipeline Design, Automated Validation
- Containerisation: Docker, Kubernetes, Minikube
- Identity & Security: Microsoft Entra ID, Azure RBAC, IAM, Secrets Management
- Scripting: Bash, Python
- DevOps Tools: Git, GitHub, Azure CLI
- Operating Systems: Linux (Ubuntu), Windows
- Cloud Infrastructure: Azure VMs, Storage Accounts, VNets, Subnets
- Networking: TCP/IP, NSGs, VNet Peering, Public/Private IP, Load Balancing
- System Administration: User/Permission Management, Linux CLI, Package Management
- Version Control: Git, GitHub

EDUCATION

Federal University of Agriculture, Abeokuta (FUNAAB), Ogun State, Nigeria

Bachelor of Agriculture (B.Agr.), Crop Protection 2014 - 2019

Transitioned into Cloud & DevOps Engineering through structured project-based training and hands-on self-study, all work documented publicly at taiwoipadeola.space
